WORK EXPERIENCE

MEP Engineer

Al Gazi Electromechanical LLC

08/2017 – 03/2019

Dubai

Key Job Responsibilities

- Managed and administered the MEP aspects of the project from the **pre-construction** budgeting/ schedule stage through procurement, shop drawing/coordination development, construction, and **contract closeout**.
- Prepared the material & shop drawing **submittal** including coordination drawing for consultant approval and raised purchase request.
- Performed study of the design drawing & spec and prepared RFI for the consultant for clarification.
- Conducted quantity take-off of each item in the project and proceeded with enquiry and price comparison.
- Coordinated issues for the MEP services raising during installation stage as per site condition.
- Prepared the valuation amount for each month based on the BOQ price and work progress. Identified and prepared the variation of works not included in the contract and onward submission to the main contractor for approval.
- Managed third-party testing and commissioning works.
- Established and maintained strategic relationships and partnerships within and outside the organisation to fully support the achievement of the functions' goals and objectives.

HVAC Engineer

Green System Technical Services

01/2016 – 07/2017

Abudhabi

Key Job Responsibilities

- Coordinated the aspects of HVAC system design across multiple Engineering disciplines including Environmental, Civil, Electrical, and Architectural.
- Monitored project schedules, timelines and deliverables using standard project management tools and engineering systems.
- Performed heat load calculations, selection of equipment and design of HVAC Systems.
- Liaised with consultants, subcontractors, supervisors, planners and the general workforce involved in the project for shop drawing preparation, site execution and commissioning.
- Assisted in the development of test and commissioning plans to enable the HVAC system to be set to work and proven to meet the client's requirements.
- Used accepted HVAC codes and specifications to produce HVAC drawings that accurately inline with building structure and meet building code and client requirement. Analyzed the models to produce a safe, economical design that satisfies the design criteria.
