MOLECULAR BIOLOGY

Test Name	Result	Flag	Units	Ref. Val.
COVID-19 RT-PCR (SARS-CoV-2)	NEGATIVE			

Sample Type: Nasopharyngeal Swab

Method:

Positive (Detected): This test is a qualitative test. Detected indicates that SARS-CoV-2 RNA is present in this specimen and suggests the diagnosis of COVID-19. Results should be interpreted in the context of all available laboratory and clinical findings.

Negative (Not Detected): This test is a qualitative test. Not detected indicates that SARS-CoV-2 RNA is either not present in the specimen or is present at a concentration below the assay's lower limit of detection. This result may be influenced by the stage of the infection and the quality of the specimen collected for testing. Results should be interpreted in the context of all available laboratory and clinical finding.

Presumptive Positive (PP): Please send a second sample for confirmation. This test is a qualitative test. Inconclusive results indicate that the presence of SARS CoV 2 RNA in this specimen could not be determined with certainty. Presumptive positive results should be repeated after 72hrs. Results should be interpreted in the context of all available laboratory and clinical findings.

Test Marked with a  are accredited under the ISO 15189 Medical Laboratory Standards
